ANNEXURE TO WARRANTY CERTIFICATE

FESTON SEV PVT. LTD. — Standard Manufacturer Warranty Terms & Performance Conditions

1. REGISTRATION MANDATE & ACTIVATION

Warranty coverage is strictly contingent upon successful product registration within **thirty (30) days** from the date of the original purchase invoice. Registration must be executed via the official portal at https://admin.festonsev.com/register or on **FESTON CARE APP**. Failure to complete registration within this timeframe completely invalidates all claims under this warranty.

2. SCOPE OF STANDARD WARRANTY COVERAGE

- **Grid-Tied & Hybrid Inverters:** Covered for a fixed term of ten (10) years from the invoice date against verifiable manufacturing and material defects. Remedies are strictly limited to repair or replacement using new or factory-refurbished parts, down to component level, at the sole and absolute discretion of **FESTON**. Standard exclusions apply to user-facing LCD displays, external plastic/rubber trims, cosmetic degradation, and third-party accessories.
- **Energy Storage Systems (ESS) / Lithium Batteries:** Covered for a standard period of ten (10) years from the invoice date. Integrated Battery Management Systems (BMS) and internal accessories carry a standard coverage of five (5) years unless a specific extension is noted on the invoice datasheet. Remedies comprise repair, component-level replacement, or a linear prorated credit calculated based on the remaining unexpired months of the warranty term. Replaced or repaired components do not extend or restart the original warranty clock.

3. BATTERY PERFORMANCE & DEGRADATION GUARANTEE

FESTON guarantees that the battery module will retain usable energy capacity according to the operational metrics detailed below, strictly evaluated at a 0.5C charge/discharge rate at a standardized reference temperature of 25°C (±2°C). Performance guarantees are null and void if cumulative energy throughput or cycles exceed the specific milestones below, or if the unit is operated outside the prescribed thresholds.

Testing & Operational Specifications

LVB-6000 / LVD-6000: 1C Rate @ 100A; LVC-3500: 0.5C Rate @ 50A; Mandatory connection via approved DC MCCB / Battery Box; Must not remain discharged >48 hours

Year of Operation	Min. Usable Capacity	Max. Cumulative Cycles	Testing & Operation Baseline
Year 1	≥ 94% of nominal	600 cycles	- Charge/Discharge: 0.5C standard rate. - Approved external DC MCCB/Battery Box usage mandatory. - Deep discharge state must not exceed 24 hours consecutive - Continuous ambient operating limits: 0°C to 45°C.
Year 2	≥ 90% of nominal	1,200 cycles	
Year 3	≥ 86% of nominal	1,800 cycles	
Year 4	≥ 82% of nominal	2,400 cycles	
Year 5	≥ 80% of nominal	3,000 cycles	
Year 6	≥ 78% of nominal	3,600 cycles	
Year 7	≥ 76% of nominal	4,200 cycles	
Year 8	≥ 74% of nominal	4,800 cycles	
Year 9	≥ 72% of nominal	5,400 cycles	
Year 10	≥ 70% of nominal	6,000 cycles	

4. TECHNICAL ELIGIBILITY & PROTECTION INFRASTRUCTURE

To qualify for warranty protection, the complete solar/storage system must be commissioned by a certified installer and must incorporate dedicated electrical safety elements. The minimum mandatory framework includes an AC Distribution Box (ACDB), a DC Distribution Box (DCDB) with adequate Surge Protection Devices (SPD), dedicated DC Molded Case Circuit Breakers (MCCB) sized appropriately for the battery loop, and a certified solid earth ground connection tracking below 5 Ohms. The customer must ensure that firmware updates are kept current and that internal system logs (BMS and inverter data records) are maintained without interruption; deleting or altering system data logs permanently invalidates coverage.

5. ABSOLUTE WARRANTY EXCLUSIONS & VOIDANCE CONDITIONS

This manufacturer warranty is completely voided, and **FESTON** shall bear no liability for repair or replacement, if a system fault or failure arises directly or indirectly from:

a. Omission, improper sizing, or bypass of external safety/protection hardware (ACDB, DCDB, SPD, DC MCCB, earthing infrastructure).

b. Incorrect mechanical or electrical integration, reverse polarity connections, loose terminal torque, or improper field cable crimping.

c. Unsanctioned access, opening of factory enclosures, physical field modifications, or repair attempts by unauthorized personnel.

d. Environmental exposure including water ingress, high-pressure washing, localized flooding, heavy industrial dust deposits, severe oxidation, salinity/coastal corrosion, or internal pest/rodent infestation.

e. Thermal abuse, operational exposure to continuous ambient heat exceeding 45°C, inadequate airflow ventilation, or direct sustained exposure to sunlight, rain, or standing water.

f. Grid anomalies, massive power surges, direct or indirect lightning strikes, external electrical short-circuits, or fire.

g. Integration with incompatible third-party batteries, uncertified inverters, or the deployment of unauthorized firmware variants.

h. Improper warehouse storage without routine maintenance recharge protocols beyond 3 months, or leaving a system depleted below critical voltage thresholds for more than 24 hours.

i. Transit physical shock, logistical damage, physical vandalism, or outright product theft.

j. Relocation, resale, or transfer of the equipment outside the original installation address or outside the borders of India without prior express written clearance from Feston Corporate Office.

6. STANDARD CLAIMS ARCHITECTURE & DIAGNOSTIC FLOW

a. **Step 1: Ticket Logging:** Claims must be registered online through the FEST CRM portal https://festcare.vr2.in/ or by emailing csm@festonsev.com within 7 days of the fault occurrence. Submissions require the original tax invoice, clear product serial numbers, active system fault codes, and a comprehensive set of photos/videos covering the complete installation layout.

b. **Step 2: Technical Triage: FESTON** technical support engineers will review data logs remotely via cloud connectivity or local extraction. A Return Merchandise Authorization (RMA) ticket number will be generated only if a defect falls within the covered parameters.

c. **Step 3: Component Allocation & Resolution:** Following validation, replacement modules or service parts will be released to field partners. Field labor and on-site support operations are scheduled in coordination with authorized service centers.

d. **Step 4: Logistics Closure:** The customer or installer must return the decommissioned faulty components, clearly marked with the issued RMA number, to Feston's logistics depot within 14 days of receiving the resolution components. Final case closure is subject to full validation during forensic failure analysis.

7. SERVICE LOGISTICS & TARGET RESPONSE FRAMEWORK

Target operational schedules are guidelines for initial engineering engagement and diagnostic deployment. These timelines are calculated from the point an RMA is officially granted, excluding periods of force majeure, logistical disruptions, or customized parts sourcing delays.

Service Coverage Region	Target Field SLA	Delivery Scope & Operational Caveats
Tier 1 Metro Centers & Major District HQs	3–5 Working Days	- Targets are dependent on immediate component stocks. - Complex bench-testing or custom factory line processing may extend resolution windows. - Freight handling and rural routing schedules are subject to local logistical infrastructure constraints.
Tier 2 / Other District Capitals	5–7 Working Days	
Semi-Urban & Registered Rural Locations	7–10 Working Days	
North-Eastern States, J&K, Union Territories & Islands	10–14 Working Days	

8. LIMITATION OF LIABILITY & LEGAL MANDATE

Limitation of Remedy: Feston's financial and operational liability is strictly restricted to the immediate repair or replacement of the physical component proven to be defective. Under no circumstances shall **FESTON**, its directors, or its affiliates be held liable for any incidental, indirect, special, punitive, or consequential damages, including but not limited to loss of power generation, lost commercial revenue, operational business interruption, alternative power generation utility costs, property damage, or bodily injury.

Non-Transferability: This warranty is issued exclusively to the original commercial or residential buyer listed on the primary tax invoice. It is non-transferable to subsequent property owners or alternative installation sites unless formal permission is granted in writing by **FESTON**.

Product Evolution & Lifecycle: Discontinued or obsolete product lines will be settled using the closest equivalent technology available in active inventory or through balanced prorated financial reconciliation, at Feston's final discretion.

Out-of-Warranty Billing: Any engineering field visits, technical diagnostics, factory evaluations, structural components, or freight logistics associated with an excluded or out-of-warranty system fault will be fully invoiced to the customer according to standard corporate commercial rates.
